Heroes of Delum is exactly the game many of us have been dreaming of for ages - a MOBA that brings a lot of the RTS elements into it, such as construction, research, upgrades, etc. Once the game is done, it will be amazing but currently it's so early in development that it's not even worth wasting your time trying it out. I'll keep an eye on development and will be very excited on the day I can turn this into a positive review!

Here's just a few of the basics that are currently lacking in the game

EDIT not even a minor update in over 4 months and from the little I've gathered from the devs I'm dropping any faith I've had in this eventually fulfilling its promise. Don't waste time with this unless it's a free weekend or you've played it beforehand and know what you're getting into.
